U.S. Patent and Trademark Office PTOL-326 (Rev. 1-04) Application/Control Number: 10/621,615

Art Unit: 3747

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-9 and 14-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kempfer ('294) in view of Lomax.

Kempfer applies as per the last office action.

Lomax teaches using the reformer gas to help operate the metal Hydride element of the fuel cell system. This reference therefore teaches using the hot gas of the reformer to directly operate a secondary system of the vehicle. The metal hydride is not preheated electrically but through direct contact with the hot reformer gas. It would have been obvious to use a delay in the system since the temperature is being monitored.

It would have been obvious to modify Kempfer by using direct heat coupling with the reformer flow to run the engine component because Lomax taught this type of direct preheating in a similar environment.

Claims 10-13 are allowed.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Applicant's arguments filed February 7, 2005 have been fully considered but they are not persuasive.

Art Unit: 3747

In particular, the applicant's argument that no direct thermal coupling occurs in Kempfer has been addressed by the application of the teachings of Lomax.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Carl S. Miller whose telephone number is 703-308-2653. The examiner can normally be reached on MTWTHF.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Henry YUEN, can be reached at 571-272-4856. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
